

[Not extensive notes just wrote things down as people were saying things to try and make sure taht i got everything that was said]

Scaling security

No overlapping code

Scalable model

Make model then the user should have complete crud control → Ryan

Want to allow a user to change those settings

Need a frontend

Making a custom component to enter a pin code → this is for the verification code

Custom components to be made

settings / profile page

Flow for register verification from reg → Auth

Directly login after registering (we also need to setup email verification to legitimize the business), create new product button in profile page, and load existing products into profile.

finishing the image uploading from any request, handling the image encoding is challenging but just needs some ample research. After that I will attempt to use the frontend to update a users picture.

End of the week → have a meeting to discuss the github account

Working on a better solution for pagination

Documentation:

- page that would give info in and out

- Reach out to dillion on clarification on some data related topics
